

AMENDMENT AND RESPONSE UNDER 37 CFR § 1.116 – EXPEDITED PROCEDURE  
Serial Number: 09/767,793  
Filing Date: January 23, 2001  
Title: METHOD AND SYSTEM FOR SCHEDULING ONLINE TARGETED CONTENT DELIVERY

Page 2  
Dkt 2050.004US1

### IN THE CLAIMS

Please amend the claims as follows.

1. (Previously Presented) A method of scheduling delivery of multiple items of content selectively to a plurality of online users, comprising:  
determining expected values relating to each user being online during a given time period; and  
generating an ordered list of the items of content to be selectively delivered to the users based on the expected values, said ordered list being prioritized to meet delivery requirements associated with said items of content.
2. (Currently Amended) The method of Claim 1 wherein said expected values are estimated ~~determined from observed known~~ behavior of individual users.
3. (Previously Presented) The method of Claim 1 wherein said expected values include a probability of each user being online during the given time period.
4. (Previously Presented) The method of Claim 1 wherein said expected values include a length of time each user is expected to be online during the given time period.
5. (Original) The method of Claim 1 wherein each said user has known profile or preference data, and said items of content are selectively delivered to users based on their profile or preference data.
6. (Previously Presented) The method of Claim 1 wherein said ordered list is periodically generated based further on prior content deliveries made.
7. (Previously Presented) The method of Claim 6 wherein said ordered list is generated daily.

## AMENDMENT AND RESPONSE UNDER 37 CFR § 1.116 – EXPEDITED PROCEDURE

Filing Date: January 23, 2001

Title: METHOD AND SYSTEM FOR SCHEDULING ONLINE TARGETED CONTENT DELIVERY

8. (Original) The method of Claim 1 further comprising generating an individual list of items of content to be delivered to each user based on the ordered list.
9. (Original) The method of Claim 8 wherein said individual list is dynamically generated for each user on user login.
10. (Original) The method of Claim 8 wherein each individual list specifies items of content for which a user is qualified to receive based on user profile or preference data.
11. (Original) The method of Claim 10 wherein said individual list excludes certain items of content based on one or more constraints.
12. (Original) The method of Claim 11 wherein said one or more constraints includes the maximum number of times an item of content can be delivered to the user.
13. (Original) The method of Claim 11 wherein said one or more constraints includes the time elapsed since a given item of content was delivered to the user.
14. (Previously Presented) The method of Claim 8 wherein generating said individual list comprises determining the position of each of said items of content in said individual list in accordance with the following equation:

$$E[Q_j] \leq -\tau(InM_j - InP_j - Inp) / \Delta$$

where,  $E[Q_j]$  is the position of a given item of content,  $\tau$  is the mean expected time period of a user online session,  $M_j$  is the desired number of impressions of the item of content to be delivered per day,  $P_j$  is the number of online users who are eligible to receive the item of content,  $p$  is the probability that a given eligible user is online on a given day, and  $\Delta$  is time period between deliveries of items of content to a user.

15. (Original) The method of Claim 1 wherein said items of content comprise advertisements to be displayed on a display device operated by each user.
16. (Original) The method of Claim 15 wherein said advertisements comprise banner advertisements.
17. (Original) The method of Claim 15 wherein said advertisements comprise pop-up advertisements.
18. (Original) The method of Claim 1 further comprising tracking which items of content have been delivered to each user.
19. (Original) The method of Claim 1 wherein said users comprise World Wide Web users accessing Web sites over the Internet, and wherein said items of content comprise advertisements displayed on display devices operated by the users.
20. (Original) The method of Claim 1 wherein said delivery requirements specify the number of times an item of content is to be delivered to the users.
21. (Original) The method of Claim 1 wherein said delivery requirements specify a time period during which a given number of deliveries of an item of content is to be made.
22. (Original) The method of Claim 1 wherein the ordered list is optimized by minimizing differences in performance between each item of content.
23. (Original) The method of Claim 22 wherein the performance of an item of content is defined by a ratio of the number of times an item of content is delivered to the desired number of times the item of content is to be delivered.

Title: METHOD AND SYSTEM FOR SCHEDULING ONLINE TARGETED CONTENT DELIVERY

---

24. (Previously Presented) A method for scheduling delivery of multiple advertisements selectively to a plurality of Web users, each advertisement being associated with a delivery contract, the method comprising:
- determining probability data relating to each user being online during a given time period;
  - based on the probability data and known prior advertisement deliveries to users, generating an ordered master list of advertisements to be selectively delivered to the users, said list being prioritized to generally fulfill said contracts; and
  - generating an individual list of advertisements to be delivered to each user on user login, said individual list specifying advertisements that said user is eligible to receive based on user profile data and in an order in accordance with said ordered master list.
25. (Currently Amended) The method of Claim 24 wherein said probability data is based on observed ~~known~~ behavior of individual users.
26. (Previously Presented) The method of Claim 24 wherein said probability data includes a probability of each user being online during the given time period.
27. (Previously Presented) The method of Claim 24 wherein said probability data includes a length of time each user is expected to be online during the given time period.
28. (Previously Presented) The method of Claim 24 wherein said ordered master list is periodically generated based further on prior content deliveries made.
29. (Previously Presented) The method of Claim 28 wherein said ordered master list is generated daily.
30. (Original) The method of Claim 24 wherein said individual list excludes certain advertisements based on one or more constraints.

Title: METHOD AND SYSTEM FOR SCHEDULING ONLINE TARGETED CONTENT DELIVERY

31. (Previously Presented) The method of Claim 30 wherein said one or more constraints includes a number of times an advertisement has been delivered to the user.
32. (Previously Presented) The method of Claim 30 wherein said one or more constraints includes a time elapsed since a given advertisement was delivered to the user.
33. (Original) The method of Claim 24 wherein said advertisements comprise banner advertisements.
34. (Original) The method of Claim 24 wherein said advertisements comprise pop-up advertisements.
35. (Original) The method of Claim 24 further comprising tracking which items of content have been delivered to each user.
36. (Original) The method of Claim 24 wherein said users comprise Web surfers accessing Web sites over the Internet.
37. (Original) The method of Claim 24 wherein said contracts specify the number of times an advertisement is to be delivered to the users.
38. (Previously Presented) A computer system for scheduling delivery of multiple items of content selectively to a plurality of online users, the computer system comprising:  
a memory for storing a program; and  
a processor operative with the program to:  
(a) determine expected values relating to each user being online during a given time period; and  
(b) generate an ordered list of the items of content to be selectively delivered to the users based on the expected values, said ordered list being prioritized to meet delivery requirements associated with said items of content.

---

Page 7  
Dkt: 2050.004US1

39. (Previously Presented) A system for scheduling and delivering multiple items of content selectively to a plurality of online users, each item of content being associated with a delivery contract, the system comprising:

a central computer for determining data relating to a probability of a given user being online during a given time period, and generating an ordered master list of items of content to be delivered based on the probability data and known prior deliveries of items of content to users, said ordered master list being prioritized to enhance fulfillment of said contracts; and

a plurality of local computers linked to said central computer, each local computer generating an individual schedule for each of a set of users logging on to said computer on user login, said schedule comprising an individual list of selected items of content to be delivered to said user in accordance with said ordered master list, said selected items of content comprising content for which the user is eligible to receive based on user profile or preference data.

40. (Original) The system of Claim 39 wherein said central computer comprises a Web server.

41. (Original) The system of Claim 39 wherein each of said local computers comprises an Internet service provider point-of-presence server.

42. (Previously Presented) A method of scheduling and delivering multiple items of content selectively to a plurality of online users, the method comprising:

determining expected values relating to each user being online during a given time period;

generating an ordered master list of the items of content to be selectively delivered to the users based on the expected values, said ordered master list being prioritized to meet delivery requirements associated with said items of content;

dynamically generating an individual list of items of content to be delivered to each user on user login, said individual list specifying items of content that said user is eligible to receive based on user profile data and in an order in accordance with said ordered master list; and

delivering to each logged on user items of content specified in the user's individual list.

43. (Currently Amended) The method of Claim 42 wherein said expected values are estimated ~~determined~~ from observed ~~known~~ behavior of individual users.
44. (Previously Presented) The method of Claim 42 wherein said expected values include a probability of each user being online during the given time period.
45. (Previously Presented) The method of Claim 42 wherein said expected values include a length of time each user is expected to be online during the given time period.
46. (Previously Presented) The method of Claim 42 wherein said ordered master list is periodically generated based further on prior content deliveries made.
47. (Previously Presented) The method of Claim 46 wherein said ordered master list is generated daily.
48. (Original) The method of Claim 42 wherein said individual list excludes certain items of content based on one or more constraints.
49. (Previously Presented) The method of Claim 48 wherein said one or more constraints includes a number of times an item of content has been delivered to the user.
50. (Previously Presented) The method of Claim 48 wherein said one or more constraints includes a time elapsed since a given item of content was delivered to the user.
51. (Original) The method of Claim 42 wherein said items of content comprise advertisements to be displayed on a display device operated by each user.

52. (Original) The method of Claim 51 wherein said advertisements comprise banner advertisements.
53. (Original) The method of Claim 51 wherein said advertisements comprise pop-up advertisements.
54. (Original) The method of Claim 42 further comprising tracking which items of content have been delivered to each user.
55. (Previously Presented) The method of Claim 42 wherein said delivery requirements specify a number of times an item of content is to be delivered to the users.
56. (Previously Presented) A method of scheduling delivery of multiple items of content selectively to a plurality of online users, the method comprising:  
receiving an ordered master list of the items of content to be selectively delivered to the users based on the expected values, said ordered master list being prioritized to meet delivery requirements associated with said items of content; and  
for each user on user login dynamically generating an individual list of items of content to be delivered to the user, said individual list specifying items of content that the user is eligible to receive based on user profile data and in an order in accordance with said ordered master list.
57. (Original) The method of Claim 51 further comprising excluding from said individual list certain items of content based on a constraint.
58. (Previously Presented) The method of Claim 57 wherein said constraint comprises a limit on a number of times an item of content can be delivered to a user.
59. (Original) The method of Claim 57 wherein said constraint comprises a minimum time elapsed since a given item of content was delivered to the user.

## AMENDMENT AND RESPONSE UNDER 37 CFR § 1.116 – EXPEDITED PROCEDURE

Filing Date: January 23, 2001

Title: METHOD AND SYSTEM FOR SCHEDULING ONLINE TARGETED CONTENT DELIVERY

Page 10

Dkt. 2050.004US1

60. (Previously Presented) A method of determining the viability of a proposed plan to deliver an item of content to online users having specified characteristics a specified number of times during a specified time period, said item of content to be delivered to said online users as one of a series of items of content delivered sequentially to the users, the method comprising:
- determining an expected position of the item of content in the series based on the number of online users having the specified characteristics, a probability that a random user having the specified characteristics will be online during the specified time period, a predicted session length for the random user, and the time period between deliveries of said items of content;
  - determining an expected number of deliveries of said items of content based on the expected position; and
  - comparing the expected number of deliveries to the specified number of deliveries.
61. (Original) The method of Claim 60 further comprising suggesting an alternative constraint if the plan is determined not to be viable.
62. (Original) The method of Claim 61 wherein said constraint comprises the specified number of times said item of content is to be delivered.
63. (Original) The method of Claim 61 wherein said constraint comprises the specified time period.
64. (Original) The method of Claim 61 wherein said constraint comprises the specified characteristics.
65. (Currently Amended) The method of Claim 60 wherein the probability that a random user having the specified characteristics will be online during the specified time period is based on observed ~~known~~ behavior of individual users.

66. (Currently Amended) The method of Claim 65 wherein a predicted session length for the random user is based on observed ~~known~~ behavior of individual users.
67. (Previously Presented) The method of Claim 60 wherein said specified characteristics comprise user profile or preference data.
68. (Previously Presented) The method of Claim 60 wherein said item of content comprises an advertisement.
